SOFTWARE ENGINEER

Software Engineer with 3 years of experience in backend development specializing in Ruby, Javascript, and Python. I have experience in creating scalable and lightweight content apis for use in mass communications and microservices. This includes hands-on experience with various technologies across different disciplines as well as communicating and partnering with external vendors. Looking for a senior level position as a software engineer.

EXPERIENCE

Backend Software Engineer

09/2020 – Present

Poshmark

Redwood City, CA

- Improved the daily average processing time of our email content APIs by 48% by updating our reads to a cache-supported architecture
- Lead architecture and development of our user-facing saved search feature as well as it's paired personalized communications
- Lead architecture and development of our email service integration with our external vendors. This included migrating all of our emails from our internal systems over to MoEngage to enable RFM and BTS audience targeting.
- Lead architecture and development of our shipping and sweepstakes promotions
- Designed the architecture of automating the documentation of all of our DB models
- Lead architecture and development of the internationalization of our sweepstakes framework
- Lead architecture and development of our new rebate promotions. This includes adding a way for our marketing opts team to schedule new promos using our existing RabbitMQ and Sidekiq queueing jobs, working closely with our data team to create new spark ETL jobs to expose new rebate-relevant information for use in analysis, and also working with our fraud team to ensure we won't run into any issues with bots.
- Automated our grand prize sweepstakes selection and claiming process by integrating with DocuSign's envelope APIs to allow users to sign affidavits and also by updating our existing sweepstakes selection jobs.

Data Engineer Intern

01/2020 – 03/2020

Poshmark

Redwood City, CA

- Created the first official airflow data pipeline that would be used as the blueprint for future iterations
- Worked with our web team to create a landing page for our recommendation system purely using the Play Framework (Scala)
- Updated our hourly sweepstakes spark ETL jobs to query allow for generic querying of any domain, enabling sweepstakes in Canada.

EDUCATION

University of California, Los Angeles

09/2014 – 06/2018

B.S. in Biology
